Sandeep Kumar Parangi

Iowa | +1(913) 275-9020 | sandeepparangi97@gmail.com | LinkedIn

Summary

Full Stack Java Developer with 5+ years of experience building scalable, high-performance applications across retail, telecom, and banking domains. Strong expertise in Java, Spring Boot, microservices architecture, and REST APIs, combined with modern frontend development using React.js and Angular. Proficient in cloud-native and DevOps practices leveraging AWS, Docker, Kubernetes, Jenkins, and Kafka to deliver resilient, event-driven systems. Experienced in integrating AI/ML, LLM, and RAG solutions, optimizing system performance, and improving MTTR while collaborating with cross-functional teams to deliver secure and user-centric solutions.

Skills

- **Programming Languages:** Java, Python, C++, SQL, JavaScript (ES6+), TypeScript
- **Frontend Development:** React.js, Angular, HTML5, CSS3, Bootstrap, Tailwind CSS, Redux, Responsive UI Development, Component-Based Architecture
- **Backend Development:** Spring Boot, Spring MVC, Microservices Architecture, RESTful APIs, API Design & Integration, Hibernate, JPA, JDBC, gRPC, Node.js, Express.js
- **Event-Driven & Distributed Systems**: Apache Kafka, Event-Driven Architecture, Asynchronous Processing, Multithreading, Concurrent Programming, Distributed Systems Design
- **Databases & Caching:** MySQL, PostgreSQL, Oracle, MongoDB, DynamoDB, Redis, Database Design, Query Optimization, Data Modeling, Caching Strategies
- **Cloud & Infrastructure:** Amazon Web Services (AWS – EC2, S3, Lambda, EKS, CloudWatch), Cloud-Native Development, Distributed Cloud Systems
- **DevOps & Containerization:** Docker, Kubernetes, Jenkins, CI/CD Pipelines, Maven, Build Automation, Infrastructure as Code (Terraform – basic exposure)
- **AI/ML & Modern Technologies:** Machine Learning Models, LLM Integration, Retrieval-Augmented Generation (RAG), OpenAI APIs, AI-Assisted Development (GitHub Copilot)
- **Testing & Quality Engineering:** JUnit, Mockito, Unit Testing, Integration Testing, Test Automation, Behavior-Driven Development (BDD)
- **Monitoring & Observability:** Prometheus, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Logging, Performance Monitoring, System Diagnostics, MTTR Optimization
- **Security & API Management:** Spring Security, OAuth2, JWT Authentication, Role-Based Access Control (RBAC), Secure API Development
- **Tools & Platforms:** Git, GitHub, Bitbucket, Jira, Postman, Apache Tomcat, Agile/Scrum, SDLC, Cross-Functional Collaboration
- **Core Engineering Competencies:** Object-Oriented Programming (OOP), Scalable System Design, High-Availability Systems, Low-Latency Architecture, Performance Optimization, Code Refactoring

Certification

- Aws Certified Developer Associate

Experience

Full Stack Java Developer | Costco Wholesale IT, USA **Mar 2025 – Present**

- Engineered scalable Spring Boot microservices and RESTful APIs, to modernize Costco's retail order and inventory orchestration systems, to support high-volume warehouse transactions, for store associates and supply chain stakeholders; improved system throughput by 35% during peak loads.
- Developed responsive React.js front-end modules integrated with backend APIs, to streamline warehouse order management dashboards, to enhance real-time visibility into inventory flows, for operations teams; reduced UI latency by 28% and improved user efficiency.
- Architected event-driven pipelines using Apache Kafka and Redis caching, to decouple inventory and billing workflows, to enable asynchronous processing and fault tolerance, for backend platform teams; reduced processing delays by 40% across distributed services.
- Deployed containerized applications using Docker and Kubernetes on AWS (EKS), to enable auto-scaling and high availability of retail systems, to ensure zero-downtime deployments, for DevOps and production support teams; improved deployment frequency by 2x.
- Implemented AI-powered recommendation services using Python-based ML models and RAG pipelines, to personalize product suggestions and optimize demand forecasting, to increase customer engagement, for e-commerce business teams; contributed to 12% uplift in recommendation accuracy.
- Integrated LLM-based developer productivity tools (OpenAI APIs, GitHub Copilot), to automate code generation, debugging, and documentation workflows, to accelerate sprint delivery timelines, for engineering teams; improved developer productivity by 25%.
- Established centralized monitoring and observability using CloudWatch, Prometheus, and ELK, to proactively detect system anomalies and reduce downtime, to enhance platform reliability, for SRE teams; reduced MTTR by 30% through alert automation and root cause tracing.

Software Engineer | Virtusa Consulting Services (Client: British Telecom) **Sep 2021 – May 2023**

- Designed and implemented Spring Boot microservices and REST APIs, to support telecom order provisioning and customer lifecycle systems, to enable scalable service orchestration, for BT enterprise customers; handled millions of service requests monthly.
- Built dynamic Angular and React.js UI components, to enhance customer service portals and self-service workflows, to improve customer experience, for telecom subscribers; increased portal engagement by 20%.
- Engineered Kafka-based event streaming architecture, to process telecom events such as activations and billing updates, to ensure real-time data consistency, for backend systems; reduced processing latency by 45%.
- Containerized services using Docker and orchestrated deployments via Kubernetes, to standardize environments and ensure seamless releases, to reduce deployment failures, for DevOps teams; cut release cycle time by 40%.
- Developed secure authentication mechanisms using Spring Security, OAuth2, and JWT, to protect customer data and APIs, to comply with telecom security standards, for enterprise users and partners.
- Optimized database performance using PostgreSQL and Oracle query tuning, to enhance API response times and reduce backend load, to support high-traffic telecom systems; improved query performance by 30%.

- Automated CI/CD pipelines using Jenkins and Maven, to enable continuous integration and faster feature delivery, to reduce manual intervention, for engineering teams; increased deployment success rate to 95%+.

Associate Engineer | Virtusa Consulting Services (Client: Citi Bank) **Aug 2020 – Sep 2021**

- Developed Java-based backend services using Spring Boot and Hibernate, to support core banking transaction processing systems, to ensure secure and reliable financial operations, for Citi banking customers.
- Implemented RESTful APIs and integrated third-party financial services, to enable seamless data exchange across banking platforms, to improve transaction processing efficiency, for internal banking systems.
- Built frontend modules using JavaScript, HTML5, and Angular, to enhance internal banking dashboards, to improve usability and reporting accuracy, for financial analysts and operations teams.
- Enhanced system security by implementing role-based access control and encryption standards, to safeguard sensitive financial data, to ensure regulatory compliance, for enterprise banking stakeholders.
- Collaborated on microservices migration initiatives, to decompose legacy monolithic banking systems, to improve scalability and maintainability, for engineering and product teams.
- Wrote unit and integration tests using JUnit and Mockito, to ensure code quality and system reliability, to reduce production defects, for QA and development teams; improved test coverage to 85%.

Software Developer | Insight Global, India **Jul 2018 – Jul 2020**

- Developed backend systems using Java and Spring MVC, to support enterprise web applications and data processing workflows, to enable scalable business operations, for client organizations.
- Engineered C++ modules for high-performance data processing, to optimize compute-intensive operations and reduce execution time, to improve system efficiency, for backend processing systems; improved performance by 20%.
- Built responsive UI components using JavaScript, HTML, CSS, and jQuery, to enhance user experience and accessibility, to support business users and clients across applications.
- Designed and optimized SQL queries and database schemas (MySQL, Oracle), to improve data retrieval performance and reporting accuracy, to support analytics workflows; reduced query execution time by 25%.
- Assisted in implementing REST APIs and backend integrations, to enable communication between distributed systems, to support scalable architecture, for enterprise applications.
- Participated in Agile development cycles and sprint planning, to ensure timely delivery of features, to align with business requirements, for cross-functional teams; consistently achieved on-time delivery targets.

Education

Master of Science in Computer Information System **Dec 2024**

University of Central Missouri Warrensburg, Missouri, USA
